PROFESSIONAL PROFILE

Java Full Stack Developer experienced in building software solutions for real business problems. I have developed backend functionality with Java, Spring Boot, REST APIs, Hibernate/JPA, MySQL and CRUD operations, as well as web interfaces using HTML, CSS, JavaScript and Bootstrap. I contributed to Syntax Logistics, a web platform sold to a small logistics company, handling backend development, deployment support, most of the UI and functional testing. I also independently developed a Python application used in airport operations to automate airport service fee calculations, integrate FlightRadar data, query SQL-based charging rules and generate Excel operational reports. I bring business judgment, analytical thinking, self-directed learning and experience leading critical processes in high-pressure operational environments.

TECHNICAL SKILLS

Backend: Java 21, intermediate OOP, Spring Boot, Spring Web, Hibernate, JPA, JDBC, Lombok, Maven, REST APIs, CRUD, data validation, Postman, Docker.
Frontend: HTML5, CSS3, JavaScript, Bootstrap, responsive design, forms, functional UI, backend integration, Figma.
Databases: MySQL, PostgreSQL, SQL, SELECT, JOIN, GROUP BY, indexes, views, transactions, relational modeling.
Tools and workflow: Git and GitHub from terminal, branches, merge, commits, version control, VS Code, IntelliJ IDEA, Ubuntu, Jira, Scrum, Agile, JUnit fundamentals.

SOFTWARE DEVELOPMENT EXPERIENCE AND PROJECTS

Syntax Logistics | Java, Spring Boot, MySQL, Bootstrap, JavaScript | *Full Stack platform sold to a small logistics company*

- Developed backend functionality with Java, Spring Boot, Spring Web, Hibernate/JPA and MySQL to support shipment quotation, management and tracking processes.
- Implemented CRUD operations connecting controllers, services, repositories, entities and a relational database.
- Supported application deployment and validated communication between backend, database and user interface.
- Built most of the interface with HTML5, CSS3, JavaScript and Bootstrap, focusing on navigation, visual structure, forms and responsive design.
- Performed functional testing on core flows, forms, validations and frontend-backend behavior before the client final review.
- Worked under Scrum methodology using Git/GitHub, Jira and Figma for task tracking, design, branches, commits and team collaboration.

Airport Services Calculator | Python, SQL, Pandas, REST API, Excel | *Independently developed application used in airport operations*

- Developed a Python application as a self-driven initiative to automate airport service fee calculations that were previously recorded manually.
- Integrated a FlightRadar REST API to detect aircraft landings and use operational events as a starting point to calculate platform time.
- Designed business rules to calculate charges by operation type, average aircraft weight, platform time, TUA and national, international or commercial parameters.
- Structured a SQL database with fees, aircraft, average weights and charging parameters used by the calculation engine.
- Automatically generated the Operational Movement Report (RMO) in Excel using Pandas, supporting airport KPI tracking.
- Completed development in three months; the tool remains in use and is operated by two people per shift within the internal process.

PROFESSIONAL EXPERIENCE

Airport Services Administrator | GAFSACOMM | *January 2025 - April 2026*

- Managed billing, invoicing and revenue-control processes related to airport services, connecting operational information with administrative and financial workflows.
- Analyzed business rules, fees, operation types and charging parameters to turn a manual process into an automated software solution.
- Managed operational and administrative information for internal reports, KPI tracking and validation of airport data.
- Collaborated with operational and administrative teams to improve workflows, reduce dependency on manual records and standardize critical operational information.

Operations Officer | GAFSACOMM | *May 2024 - January 2025*

- Monitored operations at Aeropuerto Internacional del Norte, including platform activity, suppliers, movement areas and operational conditions.
- Prepared operational documentation such as NOTAMs, Runway Condition Reports and platform reports to support compliance, traceability and decision-making.
- Coordinated with authorities, suppliers, maintenance teams, operational staff and the airport community to ensure continuity and operational safety.
- Delivered training on movement-area circulation and operational safety, strengthening internal procedures and incident prevention.

Operations Supervisor | Aerolineas Ejecutivas | *July 2018 - January 2024*

- Coordinated an average of 20 flights per shift, with peaks of up to 50 daily operations, prioritizing tasks in a high-pressure environment.
- Led 23 collaborators across three shifts, coordinating ramp, fueling, maintenance, cleaning, customer service and ground support teams.
- Supervised operational times, punctuality, crew support, fuel coordination, flight plans, incidents and customer communication.
- Made operational decisions during contingencies, delays or priority changes while maintaining communication with authorities, crews and internal teams.
- Tracked operational KPIs, ground support equipment reports and incidents to improve control, traceability and operational efficiency.

EDUCATION

- Technical Degree in Business Administration - William Blake | 2022.
- Continuous self-directed training in Java, Python, SQL, web development and programming tools.

CERTIFICATIONS

- Java Full Stack Developer - AIFYC Institute Texas | 480 hours | Virtual modality | 07/16/2026.
- Java Full Stack Developer Bootcamp - Generation Mexico | 2026.
- Introduction to Java Development - Accenture.
- Operational KPI Analysis and Monitoring - Corporate Training | 2025.
- Airport Operations Management - GAFSACOMM | 2025.
